

Phase I and the Future

- Agricultural**
- fruit and nut trees with companion plants
 - grove of large nut trees
 - nursery area
 - materials depot
 - rain gardens

- Environmental**
- improvement of soil in planting areas
 - invasive exotic plant removal
 - rain gardens
 - riverbank protection

- Functional**
- improved parking
 - multiple access points
 - clear sightlines

- Recreational/Social**
- community garden
 - mown field for ad hoc play
 - recreational walking path
 - fishing platform
 - gathering space for groups
 - picnic area under cottonwoods
 - scenic views to the water

Key
 Goals met or under way Still to come

Goals

The edible forest garden at McWaters Park is a resource for the entire community that

- produces food
- models a small-scale, intensive form of agriculture
- is fun and instructive
- provides long-term stewardship of the land

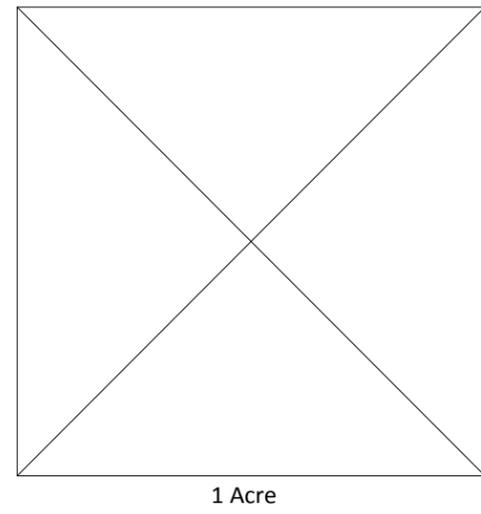

- Short-Term Goals**
- Meet with key groups to coordinate plans: tree committee, highway department, park and recreation committee, CDC, and others.
 - Begin the work of preparing planting areas.
 - Create the first demonstration garden.
 - Stabilize the banks near parking.

What is an edible forest garden?

“An edible forest garden is a perennial polyculture of multipurpose plants. Most plants regrow every year without replanting: perennials. Many species grow together: a polyculture. Each plant contributes to the success of the whole by fulfilling many functions: multipurpose. In other words, a forest garden is an edible ecosystem, a consciously designed community of mutually beneficial plants and animals intended for human food production.”

--Jacke and Toensmeier,
Edible Forest Gardens

Drawing based on aerial imagery from 4/7/2009, accessed from Google Earth on 1/16/2012, drawing by Ned Wood, and approximate site measurements. Not a legal survey. For demonstration purposes only. All measurements should be ground-truthed prior to installation.
